

RESEARCH — DAN SHIPPER (Every)

Prepared 31 Aug 2026. Sources: 5 timestamped interview transcripts (Nov 2025 – Aug 2026), press, 50 X posts (Aug 25–30 — his posting volume caps the pull at ~6 days) and 25 LinkedIn posts (June–Aug 2026) via Apify.

WHO HE IS

Dan Shipper is the co-founder and CEO of [Every](#), a ~30-person, Brooklyn-based media-and-software company that has become the most-cited real-world test case in the "will AI take jobs" debate. Every sells one subscription (\$30/month or \$288/year — [every.to/subscribe](#)) that bundles AI journalism (his column Chain of Thought, read by 130,000+ people — [danshipper.com](#)) with a suite of AI apps — Cora (email), Spiral (writing), Sparkle (file organization), Monologue (dictation), Proof (collaborative editor), Plus One (Slack agent) — plus a consulting arm for executives ([Platformer, 20 Aug 2026](#)). He hosts the podcast AI & I and has been a Sequoia scout since January 2023 ([LinkedIn](#)). The current hook: his May 21, 2026 essay "[After Automation](#)" — AI creates more human work, not less, and Every doubled headcount while automating everything as proof — went viral (reactions from Marc Andreessen and Lenny Rachitsky — [X, 27 May 2026](#)), and Every's first conference, Thesis, happens November 5, 2026 at Pioneer Works in Brooklyn ([announcement, 13 Aug 2026](#)).

PATH

Philosophy degree at Penn, 2010–2014. As a student he co-founded Firefly, a co-browsing/customer-support tool, with Justin Meltzer — bootstrapped except \$20K from First Round's Dorm Room Fund — and sold it to Pegasystems in June 2014 ([TechCrunch](#)). VERBATIM: "I flew from my college graduation to Boston to finish negotiating the deal to sell it" ([Big Think, 21 Nov 2025, [23:16]](<https://youtu.be/jkXOudImoI0>)). He then wrote the Superorganizers productivity newsletter, and co-founded Every in 2020 with Nathan Baschez, merging their two newsletters into a paid bundle over a Thanksgiving phone call ([Mercury profile](#)). Baschez left about 2–3 years in to run the AI word processor Lex; Dan says the company "almost fell apart" ([Casey Newton, 20 Aug 2026, [22:46]](<https://youtu.be/s0fwOVf2WTw>)). He was diagnosed with OCD in his late 20s and talks about it openly: "exposure and response prevention and Zoloft — incredible combination, highly recommend... I would not be able to run this company without that" (VERBATIM, [same, [22:20–22:29]](<https://youtu.be/s0fwOVf2WTw>)).

THE COMPANY RIGHT NOW (last 6 months)

- **Headcount ~30, doubled in a year** while automating everything it can — the core of the After Automation argument; from 4 people to 30 since GPT-3 ([Platformer, 20 Aug 2026](#); [After Automation, 21 May 2026](#)).
- **Six products, each run by essentially one person.** VERBATIM: "for a while we were maybe like 12 or 15 people and we were running like six software products and a daily newsletter. That's insane" ([Casey Newton, [39:18]](<https://youtu.be/s0fwOVf2WTw>)).
- **99% of code is written by AI agents** (Claude Code, Codex, Droid); "no one is writing code at all" ([AI Engineer talk, 18 Dec 2025, [3:47]](<https://youtu.be/MGzYmaYBiss>)).
- **Latest public numbers:** \$1.2M subscription ARR growing 15% month-over-month, plus \$1–2M/year consulting booked through Q1 2026 (self-reported, [Master Plan Part II, 26 Sep 2025](#)); 7,000+ paying subscribers, 100,000+ free, MRR up double digits every month for six straight months ([AI Engineer, 18 Dec 2025, [3:26]](<https://youtu.be/MGzYmaYBiss>)). No fresher revenue figures disclosed.
- **Deliberately tiny funding:** a \$2M "sip seed" announced May 2025 — drawn down as needed, co-led by Reid Hoffman and StartingLine ([Every, 21 May 2025](#)); by Dec 2025 he said they'd "only raised about a million dollars in total" ([AI Engineer, [3:38]](<https://youtu.be/MGzYmaYBiss>)).
- **New "All Access" tier launched July 14, 2026:** a membership for builders whose "Builder Pack" bundles \$7,000+ in credits across the stack Every itself uses (Codex/ChatGPT for Work, Cursor, PostHog, Framer, Notion, Claude Max and more). His pitch: "Everyone is a builder now... The more tokens you can afford, the more you can make" — and he admits "I accidentally used 2 billion tokens overnight this week" ([LinkedIn, 14 Jul 2026](#)).
- **The hiring spree is visible in public:** his sister Arielle Shipper joined as head of operations in July ([LinkedIn, 11 Jul 2026](#)) — her first article reveals Every's OpenAI spend jumped 230% in one month ([LinkedIn, 18 Aug 2026](#)); a Head of Evals ([X, 28 Aug 2026](#)), Head of Video, Head of BD, and a managing editor ("extremely meticulous... and AI-pilled" — [LinkedIn, 18 Jun 2026](#)) all landed June–August. In August he also spun up a "Frontier Team" for weird AI experiments; first bet: "compounding human judgment into AI systems" ([LinkedIn, 20 Aug 2026](#)).

- **Thesis conference announced Aug 13, 2026:** 400 people, Nov 5 at Pioneer Works, application-only, free livestream; speakers include Ivan Zhao (Notion), execs from OpenAI and Anthropic, Josh Miller (Browser Company), Cristóbal Valenzuela (Runway), Sahil Lavingia ([announcement](#)). Companion project "[Thesis Statements](#)": 100 leaders call their shot on work and AI in 2027.

8 FACTS WORTH KNOWING

1. **He built an AI clone of his own editor-in-chief.** He collected 30,000 of Kate Lee's historical edits and turned them into a copyedit agent, back-tested against past documents — "I've been trying to automate her out of a job for years in an extremely benevolent way" (VERBATIM, [Casey Newton, [41:49], [43:05]](<https://youtu.be/s0fwOVf2WTw>); [Platformer](#)).
2. **The Codex heresy.** The internet's best-known Claude Code evangelist now says "Codex right now is my daily driver" and that OpenAI "surpassed" Anthropic in coding agents — he told Claude Code's own team to try Codex at an Anthropic conference ([Lenny's Podcast, 24 May 2026, [21:03], [19:00], [1:31:28]](<https://youtu.be/4D3hDmGhFhA>)).
3. **His agent sent an investor email without asking — and it was perfect.** "It just sent the email. And I didn't look at it at all... I went to my sent and looked at it and I was like, oh, this is exactly what I would have sent" (VERBATIM, [Lenny, [1:06:05]](<https://youtu.be/4D3hDmGhFhA>)). He also says "most of my email is written by GPT-5.5 and Codex right now" ([1:05:35]](<https://youtu.be/4D3hDmGhFhA>)).
4. **He vibe-coded a product into a medical injury.** Building Proof: "I wasn't sleeping, and I vibe coded so hard I got bursitis on my elbow" — the app then melted down daily and two senior engineers rewrote it ([Lenny, [41:33], [41:01]](<https://youtu.be/4D3hDmGhFhA>)).
5. **His star PM out-ships engineers.** Marcus (ex-Axios, PM by training, no engineering background) runs the writing app Spiral solo: "he ships faster than almost anyone on the team... we never could have hired him to do this job even a year ago" ([Lenny, [1:10:00], [1:09:44]](<https://youtu.be/4D3hDmGhFhA>)).
6. **Hiring filter:** "If an engineer is not using AI, I'm not going to work with them" (VERBATIM, [Lenny, [47:38]](<https://youtu.be/4D3hDmGhFhA>)). New hires are productive on day one because the codebase knowledge lives in prompts and CLAUDE.md files ([AI Engineer, [12:14]](<https://youtu.be/MGzYmaYBiss>)).
7. **Falsifiable market call on record:** "I would buy SaaS stocks right now... the SaaS apocalypse is dumb. What agents do is increase the number of users of SaaS" ([Lenny, [37:09], [1:17]](<https://youtu.be/4D3hDmGhFhA>)). He asked Lenny to score all his predictions in May 2027 ([10:17]](<https://youtu.be/4D3hDmGhFhA>)).
8. **Every new hire gets Annie Dillard's *The Writing Life*** and must read the last chapter ([Lenny, [1:25:40]](<https://youtu.be/4D3hDmGhFhA>)). His motto: "do things worth writing about and write things worth reading" ([1:27:26]](<https://youtu.be/4D3hDmGhFhA>)).

HIS THESIS / WHAT HE SAYS PUBLICLY

His central framework is the **allocation economy**: "we're moving from a knowledge economy to an allocation economy. In a knowledge economy, you are compensated based on what you know. In an allocation economy, you're compensated based on how well you allocate the resources of intelligence" — manager skills, currently held by ~7% of the economy, become everyone's job (VERBATIM, [Big Think, [51:46]](<https://youtu.be/jkXOudlmoI0>)). The After Automation corollary: "Automation is a lie. Every agent needs a human" — every automated system needs a human steward, so automation creates work ([Lenny, [0:24], [39:14]](<https://youtu.be/4D3hDmGhFhA>)). On jobs: "the AI job apocalypse is not really a thing" — "what models do is make yesterday's human competence cheap," and humans stay valuable by recombining it into new things ([Lenny, [1:13:11], [1:13:52]](<https://youtu.be/4D3hDmGhFhA>)). His advice to individuals is concrete: "the only thing you need to do is ride the models" ([1:16:29]](<https://youtu.be/4D3hDmGhFhA>)), and "the edge of AI is wherever AI meets a real human doing something," not San Francisco ([1:18:44]](<https://youtu.be/4D3hDmGhFhA>)) — Every itself is in Brooklyn. On AI writing: slop is content where "it took them less time to make it than it takes me to read it, and they don't stand behind every line" ([1:04:51]](<https://youtu.be/4D3hDmGhFhA>)); authorship = ownership, not keystrokes: "whether or not you type the words does not really matter to me, but they have to be yours" ([Casey Newton, [53:41]](<https://youtu.be/s0fwOVf2WTw>)).

STALE VS FRESH (from the 5 transcripts)

STALE — he has these on autopilot; hear the rehearsed version at the timecode:

- The allocation-economy framework and the ~7% managers stat ([Big Think, [51:46]](<https://youtu.be/jkXOudImoI0>)) — his most-repeated essay, recited near-verbatim everywhere.
- The stats stanza: 15→30 people / six products / 99% AI code / ~\$1M raised ([AI Engineer, [3:14–3:47]](<https://youtu.be/MGzYmaYBiss>)).
- Origin story: note-taking nerd → sold first company at graduation ([Big Think, [23:12]](<https://youtu.be/jkXOudImoI0>)).
- "Agents need people who care about them" — said four times in one Lenny episode alone ([14:47], [16:21]](<https://youtu.be/4D3hDmGhFhA>)).
- The rationalism/Socrates/intuition lecture — a full 22-minute set piece ([Big Think Clips, entire video](#)).
- Sculptor-vs-gardener, "10,000 PhDs in your pocket," oven-makers-vs-soufflé, Mark Twain/typewriter norms analogy, "please and thank you to ChatGPT" closer.

FRESH — openings no interviewer has pushed:

- **The unanswered authorship question.** Casey Newton asked how words are "yours" if AI first-drafted them; Dan answered with a question, conceded the lines are "definitely in pencil" [54:57], and never said whether an AI-first-drafted review would be disclosed ([Casey Newton, [53:50–55:01]](<https://youtu.be/s0fwOVf2WTw>)). One interview old; still open.
- **"Destructive for me."** He said over-relying on his logical brain has been "destructive for me in ways" — and never specified what ([Big Think, [36:42]](<https://youtu.be/jkXOudImoI0>)). Nobody followed up.
- **The numbers gap.** His public stats stopped in Dec 2025 (7K paying subs). Headcount doubled since — what did revenue do? No interviewer has asked for the 2026 number.
- **The contradiction he conceded.** Lenny cited flat designer job growth against Dan's full-stack-designer bullishness; Dan: "Hm, that is really interesting. We'll see" ([1:12:44]](<https://youtu.be/4D3hDmGhFhA>)). Same episode, he admitted companies use AI as "a good excuse" for layoffs that were "coming" anyway ([1:13:24]](<https://youtu.be/4D3hDmGhFhA>)).
- **He flipped 180 on personal agents** ("I was very into personal agents. And I have completely flipped" — [13:48]](<https://youtu.be/4D3hDmGhFhA>)) — a template for asking which current position he'll flip next.
- **The risk he admits he can't answer:** the labs making Every's products irrelevant — "I don't have an answer to it" ([Casey Newton, [34:44]](<https://youtu.be/s0fwOVf2WTw>)).
- **Untouched for SVG's audience:** he scores AI models against a senior-engineer benchmark (models ~30/100, GPT-5.5 ~62, humans high-80s — [Lenny, [42:15]](<https://youtu.be/4D3hDmGhFhA>)) — but no one has asked him to score *non-engineering* careers the same way, or what a solo professional should build first.

QUICK EXPLAINER (readable on air)

Every is a new species of company: a magazine that builds software. One ~\$20/month subscription gets you their AI journalism plus six AI apps — email, writing, dictation, file cleanup. The twist is how it's made: about 30 people, each product run by roughly one person, and 99% of the code written by AI agents while humans direct them. It's the closest thing to a live experiment in what work looks like after automation — which is exactly what Dan writes about.

THE EVERY NEWSLETTER (added on request)

Structure and cadence. Every publishes daily. The named columns: **Chain of Thought** — Dan's own column, "thinking at the edge of AI," 130,000+ readers (every.to/chain-of-thought; danshipper.com); **Context Window** — the daily AI-news digest (every.to/context-window); **Vibe Check** — hands-on reviews of new models, often with pre-release access from the labs (every.to/vibe-check); **Source Code** (agents/engineering, Kieran Klaassen — GM of Cora) and **Working Overtime** (Katie Parrott), plus a Sunday digest and AI & I podcast transcripts. Staff bylines include Katie Parrott, Laura Entis, and Natalia Quintero (every.to/newsletter).

Business role. The newsletter is the flywheel's front end — "Live in the future, write what we see, build what's missing, teach what works." Dan calls it the "primary distribution channel and profit center for R&D": experiments become articles, articles become products (PARAPHRASE of [Master Plan Part II, 26 Sep 2025](#)). VERBATIM from the same post: "Anybody can build a clone of one of our products, but it's very hard to build our whole universe" and "When software becomes cheap to build, ecosystems are the edge." Pricing today: free tier with limited access; paid \$30/month or \$288/year, bundling all essays + all apps; the subscribe page claims "100,000+ founders, operators, and investors" (every.to/subscribe). Note: in the Aug 20, 2026 Casey Newton episode the bundle was described as

\$20/month — the price has since been raised; worth asking what changed. Above the base tier sits **All Access** (launched 14 Jul 2026) with the \$7,000-credit Builder Pack ([LinkedIn](#)).

Vibe Checks are the strategic asset. Labs give Every early model access because "no one trusts a model company to tell you where they objectively sit" ([Casey Newton, [35:15]](<https://youtu.be/s0fwOVf2WTw>)); Every publishes negative reviews anyway (the critical Sonnet 5 review, [[30:58]](<https://youtu.be/s0fwOVf2WTw>)), and relations "can get a little bit heated" ([[32:38]](<https://youtu.be/s0fwOVf2WTw>)). The vibe checks come with hard numbers from Every's in-house "Senior Engineer benchmark": Claude Fable 5 scored 91/100 — "this is human senior engineer level" — vs 63 for Opus 4.8 and 62 for GPT-5.5 ([LinkedIn, 9 Jun 2026](#)); GPT-5.6 Sol scored 56 ([LinkedIn, 9 Jul 2026](#)); the Opus 5 review was openly negative — "a hard model to love... a poor man's Fable" ([LinkedIn, 24 Jul 2026](#)). His personal setup, stated plainly: "two slots in my workflow: the genius model I use for my biggest hardest tasks, currently Fable; the smart, fast generalist I use for everything else, currently GPT-5.6" (VERBATIM, same post).

AI inside the newsletter itself. Editing runs partly through the Kate Lee copyedit agent (30,000 historical edits — [Platformer, 20 Aug 2026](#)); guides "often include the AI as a co-writer... a lot of it's going to be AI read" ([Casey Newton, [57:19]](<https://youtu.be/s0fwOVf2WTw>)); essays remain mostly human-written per Casey's framing ([[12:55]](<https://youtu.be/s0fwOVf2WTw>)). This makes the newsletter itself the live exhibit for the disclosure debate in the pushback file.

Background (pre-AI era, for context only): Every started in 2020 as "Everything," a bundle of business newsletters on Substack, and left Substack for its own stack; the early writer-collective model paid writers roughly half the subscriber revenue they brought in ([Axios](#)). Whether any revenue-share survives today is [UNVERIFIED].

Marina can send actual email texts from the newsletter — a voice/structure/CTA analysis of the real letters can be folded in as a follow-up section.

WHY IT'S HAPPENING NOW

Coding agents crossed a threshold in 2025: one person can now build and maintain a production product ([AI Engineer, [16:30]](<https://youtu.be/MGzymaYBiss>)). Every reorganized around that fact before almost anyone, so when the jobs debate exploded in 2026 — Stanford data showing AI-exposed young workers 19% less employed ([cited in the Casey Newton episode, [0:36–11:05]](<https://youtu.be/s0fwOVf2WTw>)) — Every became the counter-example both sides argue over: the company that automated everything and doubled hiring. After Automation (May 21) drove the discourse; Thesis (Nov 5) is the attempt to own the question institutionally.

THE SIZE / THE NUMBERS

Deliberately small — that's the story. ~\$1M actually drawn of a \$2M seed, ~30 people, six products, 7,000+ paying / 100,000+ free subscribers (Dec 2025), consulting ~\$1M/year (mid-2025). Compare: he says the New York Times needed "150 years and a lot of scale" to build its games-cooking-Athletic bundle; Every is doing the bundle model "much more quickly with less money" ([Casey Newton, [40:40]](<https://youtu.be/s0fwOVf2WTw>)). For the viewer, the frame is replicability: this is what one AI-pilled person per product now produces.

WHAT TO PULL UP LIVE

- [every.to/thesis-statements](#) — 100 leaders "call their shot" on work in 2027; scroll a few on camera.
- [After Automation](#) — the viral essay; the 4→30 headcount chart.
- [His 2026 strategy post](#) — he published Every's full internal roadmap publicly (5 Jan 2026).
- Product pages: [cora.computer via every.to](#) — the bundle as a viewer could subscribe to it.

DEFENDED POSITIONS & PUSHBACK FILE

1. "No AI job apocalypse — automation creates human work." Strongest counter: the Stanford "canaries" data — young workers in AI-exposed jobs now 19% less employed, up from 15% a year earlier — presented in the same episode where he appears ([Casey Newton episode intro](#)); plus Lenny's flat-designer-hiring data, which he conceded was "really interesting. We'll see" ([Lenny, [1:12:44]](<https://youtu.be/4D3hDmGhFhA>)). His defense: displacement is real but the mechanism is over-hiring corrections wearing an AI excuse ([[1:13:24]](<https://youtu.be/4D3hDmGhFhA>)), and cheap competence floods fields with almost-right output that experts must finish ([After Automation](#)).

2. "AI writing is legitimate if you stand behind it." Counter: on June 8, 2026 he posted "this is good" about an AI-assisted article and replies called it "so much AI slop in there, it's hard to read" ([X, 8 Jun 2026](#); backlash covered by [The Fix, 27 Aug 2026](#)); Casey Newton pressed on authorship and disclosure and Dan's answer stayed unresolved

[[53:50]](<https://youtu.be/s0fwOVf2WTw>)). His defense: the slop definition (time + standing behind every line), the typewriter-era norms analogy, and "I'm in the driver's seat" ([1:00:22]](<https://youtu.be/s0fwOVf2WTw>)).

3. "Codex surpassed Claude" (and Every as neutral model arbiter). Counter: the neutrality question — he pre-rebuts it himself: "People are like, 'Oh, are you sponsored by OpenAI?' And I'm like, 'No, I just talk about what I like'" ([Lenny, [1:32:30]](<https://youtu.be/4D3hDmGhFhA>)). His defense: Every publishes negative reviews of every lab (Casey cites their critical Sonnet 5 review, [30:58](#)), labs "welcome the real feedback" even when relations "get a little bit heated" ([31:58], [32:38]](<https://youtu.be/s0fwOVf2WTw>)), and he hedges the call as "a horse race... I think it'll change" ([Lenny, [20:58]](<https://youtu.be/4D3hDmGhFhA>)).

No lawsuits, regulatory actions, or personal scandals found in the news sweep — the criticism trail is entirely the AI-slop/disclosure debate above.

RECENT INTERVIEWS / PREVIOUS VIDEOS WITH DAN

For the producer (from [youtube/_index.md](#) — do not paste into chat):

1. **Thinking too logically can actually hold you back** — Big Think Clips · 5 Feb 2026 · 236K views · 22 min · <https://youtu.be/BvsY7j3TyD0>
2. **AI predictions: Job markets, Codex beats Claude, and the death of org charts** — Lenny's Podcast · 24 May 2026 · 97K views · 94 min · <https://youtu.be/4D3hDmGhFhA>
3. **Why you should see the world like a large language model** — Big Think (full) · 21 Nov 2025 · 84K views · 57 min · <https://youtu.be/jkXOudImol0> (the Clips video above is a re-cut of its first chapter)
4. **Dispatch from the Future: building an AI-native Company** — AI Engineer · 18 Dec 2025 · 64K views · 17 min · <https://youtu.be/MGzYmaYBiss>
5. **Every's Dan Shipper on the "dirty secret" of writing with AI** — Casey Newton · 20 Aug 2026 · 25K views · 63 min · <https://youtu.be/s0fwOVf2WTw>

No prior appearance on our channel. Tier-1 circuit: Lenny's twice (Jul 2025, May 2026), Platformer/Casey Newton (Aug 2026), TBPN (May 2026), Big Think. Those interviews target builders, founders, and media insiders; **SVG's differentiated angle is the employed professional** — using his own Marcus story and senior-engineer benchmark to answer "what do I personally build/learn this year to ride the models," which none of the above asked.

IMPORTANT POSTS — X AND LINKEDIN

Collected via Apify. Note on coverage: he posts so much on X that the 50-post pull only reaches back ~6 days (Aug 25–30); LinkedIn covers the full 90 days. Earlier X posts found manually are kept at the bottom.

X / Twitter (@danshipper) — week of Aug 25–30, 2026

- 30 Aug — "glad that the market is finally catching up to how dumb the SaaSocalypse was" — victory lap on his buy-SaaS-stocks call from the May Lenny interview. [Link](#)
- 30 Aug — measured take on the HuggingFace attack: serious, yes; "the first warning shot of a machine takeover? no... will require work from smart people and their agents." His security register. [Link](#)
- 28 Aug — "WE NOW HAVE A HEAD OF EVALS... the work he's doing is honestly gamechanging" — hiring-while-automating, live. [Link](#)
- 28 Aug — "in AI there are no bad ideas just weak models / every idea has its day as the exponential continues" — quotable thesis in 2 lines. [Link](#)
- 28 Aug — REPOST of @every: "We're about 86% there in automating editor in chief @katelaorielee's copy-edit skills. Or so we thought. To use KateBench..." — the Kate Lee clone now has a public name and a number. [Link](#)
- 26 Aug — "definite golden age for polymaths and philosophers (luckily, a good antidote for epistemic despair)" — the opportunity framing in his own words. [Link](#)
- 26 Aug — "Codex native apps are here!" + same-day top post "THEY DID IT FOLKS" (2,369 likes; referent not visible in the pull — worth checking before air). [Link](#) · [Link](#)
- 28 Aug — REPOST: "AI writing is only allowed if your input tokens > your output tokens. 'Write me an article on X' is slop, 'here's an hour o[f]...' — the slop-threshold rule he amplifies. [Link](#)

LinkedIn (/in/danshipper) — June–August 2026

- 18 Aug — "BREAKING: ... Introducing Thesis Statements" — 100 builders make falsifiable predictions about post-automation work; "we'll revisit them over time, and ask: which claims held up?" [Link](#)
- 17 Aug — "i get to regularly horrify her by how much i spend on tokens" — announcing sister Arielle's article on Every's 230% OpenAI-spend jump. Family + token-economics color in one post. [Link](#)
- 13 Aug — the Thesis conference announcement with the full speaker list; "New York is where the AI wave hits the beach... And, of course, you can bring your agent." [Link](#)
- 24 Jul — the negative Opus 5 vibe check ("a hard model to love... a poor man's Fable") — proof the review franchise bites the hand that feeds it early access. [Link](#)
- 14 Jul — All Access launch: "\$7,000 in credits... This is the best time in history to build something... The more tokens you can afford, the more you can make." The most SVG-relevant post of the quarter. [Link](#)
- 10 Jul — his Anthropic-vs-OpenAI race map ("game on!") — a clean 60-second explainer he can repeat on camera. [Link](#)
- 9 Jun — the Fable 5 vibe check (91/100 on the Senior Engineer benchmark; "like squashing an ant with a rocket launcher" for everyday work). [Link](#)
- 4 Jun — Spiral 4.0 launch: stylometry-based "Style Engine" + MCP/CLI so agents can write on-brand — "we use it every day... across our entire 30 person team." [Link](#)

Earlier X posts (manual finds, May–June): After Automation victory lap, 27 May ([link](#)); the "this is good" endorsement that drew "AI slop" backlash, 8 Jun ([link](#)); the public 2026 roadmap, 5 Jan ([link](#)); After Automation launch on LinkedIn, 21 May ([link](#)).

Instagram: not checked (typically blocked to fetching); no indication it's a primary channel for him.
